

## Eric Kabrams – Biography

Eric has been leading technology development in bioinformatics, machine-learning, brain-machine-interfaces, and next-generation-imaging at 4Catalyzer. Before coming to 4Catalyzer, Eric studied math and physics at The University of Pennsylvania and Electrical Engineering and Neuroscience at Stanford.

When the COVID-19 pandemic broke out, the 4Catalyzer team decided to devote substantial resources and time to helping society fight the spread of the virus. The 4C team identified a key need that their skills are well-situated to address: the need for widespread testing. The team is hard at work developing an at-home, inexpensive, widely available COVID-19 test with a cloud-connected companion mobile app. In this effort, Eric is leading the software and regulatory teams.
